THE ETNA'S NOCELLARA

A VARIETY OF OLIVES CULTIVATED AND HARVESTED ONLY USING AGE-OLD METHODS

The ancient Nocelleria dell'Etna is cultivated over a limited Territory in the Catania province along the Etna's slopes including the Municipalities of Belpasso, Paternò, S. Maria di Licodia and Biancavilla, whose characteristics belong to the lands of vulcanic origin.

In these places where mechanization is complicated, all the operations required for looking after the plants such as pruning, cleaning the ground and harvesting the fruits during October and November are performed by hand in the same way as it has been done over the centuries, cultivating over time the same ancient, unique traditions and heritage.

OIL CHARACTERISTICS

GOOD, HEALTHY AND RICH IN PROPERTIES SALUTARY TO OUR BODIES

Extra virgin olive oil of the Nocellara Etnea variety has the following characteristics:

- Its colour appears to be emerald green with light golden yellow lights;
- Our noses detect a light to medium green fruity effect with the scent of artichokes, tomatoes, newly-cut grass and sensations of almonds;
- This oil affects our palates in a light and delicate fashion, slightly bitter as well as spicy.

Because of it delicate scent and slight bitter and spicy notes, together with a low degree of acidity so as to not prevaricate but rather exalt the taste of the food eaten. It goes particularly well with all typically Mediterranean dishes rich in the scents, aromas and colours of our territory.

Etna is 3,350 meters high and is not only the most highest active volcano in Europe declared by UNESCO as Patrimony of Humanity, but it is as well the predominant feature of a territory that has over many millenniums influenced the lives of the people and plants that have populated it throught an infinite number of eruptions and powerful thermal changes.
